

# Alfalfa ARAGON

Large leaves. Thin and empty stem

## ARAGON

Alfalfa ARAGON is noted by their thin and empty stems and their large leaves, so it has a high leaf/stem relation. **High quality forage.**

ARAGON performance very well to the lands and climatic conditions of the Ebro Valley. It resist very well the cold winters and hot summers. **Adapted to high frequency cuts.**

ARAGON behaves well as in an intensive irrigated production, with up to 6 cuts, as in dry lands.

### Alfalfa ARAGON,

- For its productivity
- For its quality forage
- For its hardiness and persistence

### GROWING AREA

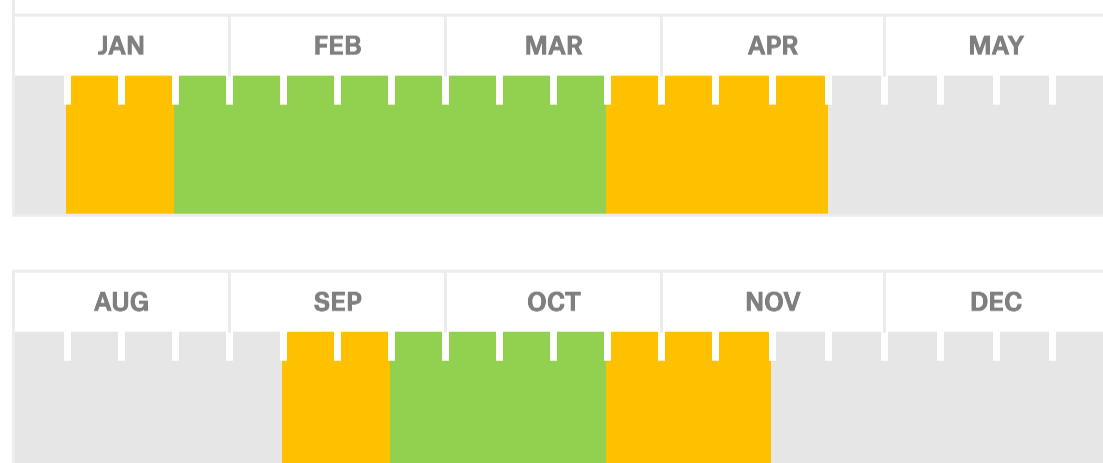

### DORMANCY

7 - 8

### Sowing period

Sowing density

30 to 40 kg/ha
