

FESCUE KORA

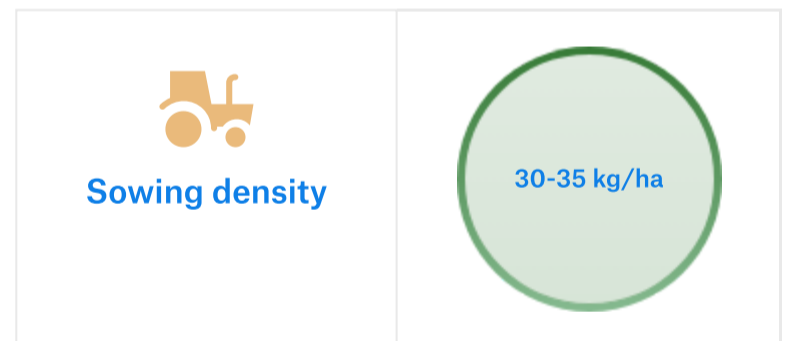

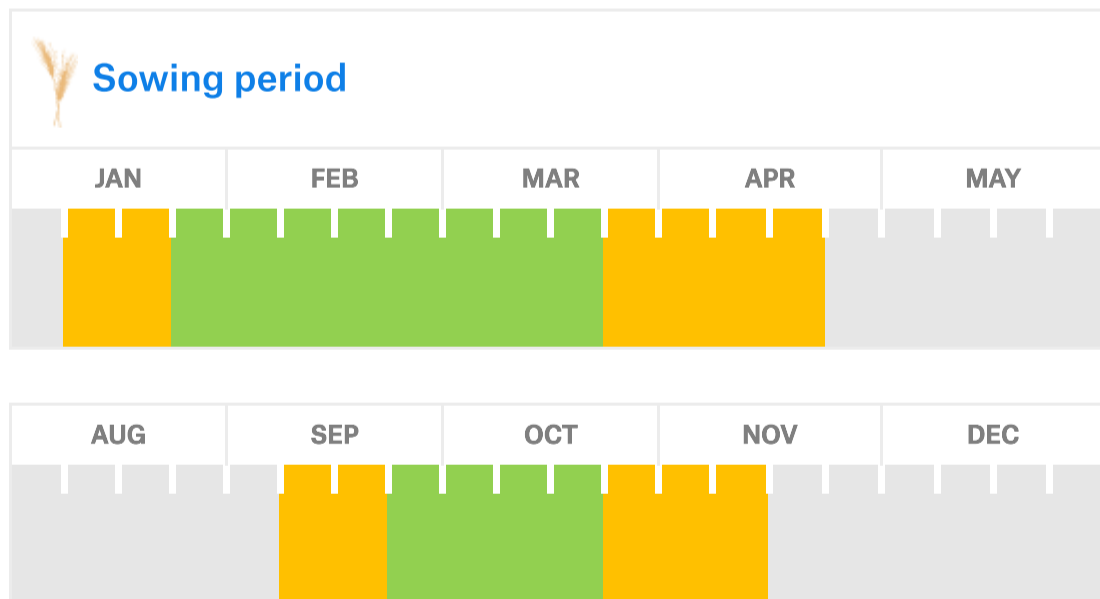

KORA is a *Festuca arundinacia* that stands out for its **high productivity and forage digestibility**. Its late maturation allows having a longer harvest period with high-quality standards.

KORA is adapted to cutting or grazing. It withstands well the frequent cuts.

KORA has good resistance to winter cold, and also to dry periods.

KORA is an endophyte free fescue;
It is, therefore, free of mycotoxins that can damage animals that feed with its forage.

AGRONOMIC FEATURES

 REGROWTH SPEED	Fast
 PERSISTENCY	High / Very High
