

Winter pea UPPERCUT

New!

An exuberant pea

UPPERCUT

UPPERCUT is a winter protein pea that has a very long flowering period, in which develops a large number of pods and flower beds, which contributes to its high productive potential.

UPPERCUT has good tolerance to cold, fer sensibility to ferric clorosis. Its height and resistance to lodging make harvesting easier.

UPPERCUT is agronomically a very good option.

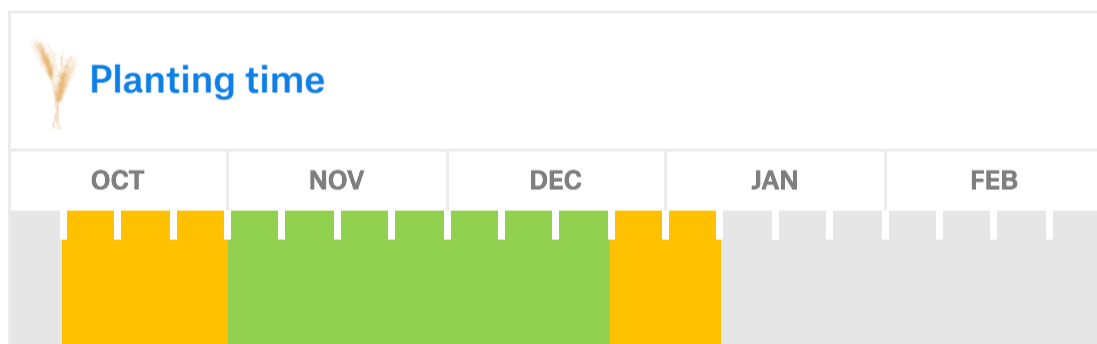

CULTIVATION AREA

COLD RESISTANCE

High

Sowing Density

180 to 210
kg/ha

AGRONOMIC CHARACTERISTICS

CYCLE	Winter
PRECOCITY	Semi-early
TALLA A MADURACIÓN	High (45/50 cm)
QUALITY	Feed
GRAIN COLOR	Yellow
PMG (THOUSAND SEED WEIGHT)	From 180 to 200 gr
PROTEIN CONTENT	Good
