

Sorghum x Sudangrass

KARIM

New generation

KARIM

KARIM is an American Sorghum x Sudangrass variety. It has a good behaviour as in a **single cut or several ones**.

KARIM is a **leafy and tall plant**, with fast regrowth. Its **late blooming** allows having a larger harvest window with high **quality** levels.

It's recommended to adapt the sowing rate to number of cuts:

25 to 30kg/ha for SINGLE cut. 35 to 40kg/ha for several cuts.

CULTIVATION AREA

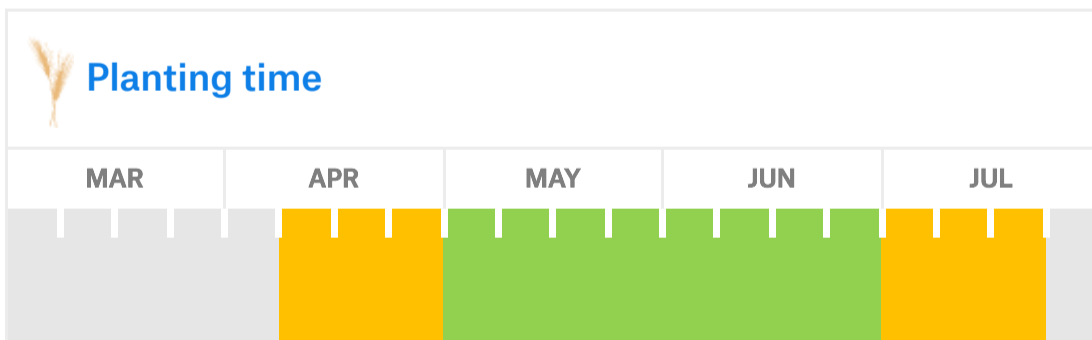

GRAIN COLOR

Reddish

KARIM has a good balance between productivity and forage quality.

Sowing Density

AGRONOMIC CHARACTERISTICS

 RIPENING	High (2.50 - 3.00 m)
 APTITUDE	Forage
 TIPOLOGY	Sorghum x Sudangrass
